The NAB petition 04-160 is bad for me as a consumer because it limits my ability to have access to important information in a timely manner which I can only get on XM instant traffic & weather. With a 60 mile one way commute each day I need instant access during the trip as conditions change to make route decisions. XM is the only place I can get that instantly. Not having that information in a timely manner causes me delays and money as a result due to increased gas usage. Quality of service should not be limited by those who do not want to step up and provide the level of service I can only get on XM Satellite Radio.
